

VOXLINE COMMUNICATION – Romanian-French company providing Internet and telecommunications services and business software applications

WHO WE ARE:

Voxline Communication S.R.L. is a Romanian-French company that specialises in **telecommunication services and business software applications** for companies. Using top technology and specialised personnel, Voxline provides solutions and full packages of high quality services, perfectly adaptable to specific clients' needs from different areas of activity. In addition to complete solutions, Voxline supplies technical support and service for maintaining and improving applications. Voxline has implemented and maintains a Quality Management System in the field of telecommunication services, having EN ISO 9001:2000 certificate from TUV CERT.

**WHAT
MAKES US
A GOOD
PARTNER**

- Experienced, high-qualified and creative team
- Extensive competence in the field of information technologies, media & advertising and banking services
- 8 years of experience

COLLABORATION INTERESTS:

Voxline is interested in all EU programmes related to IT and the telecommunication sector. Our possible role in collaboration: technology/ user partner.

AREAS FOR POTENTIAL COLLABORATION:

- Telecommunication software development and implementation
- Call centres
- Interactive SMS and IVR services
- Internet, Intranet and Web services
- Business intelligence and data mining

MAIN ACHIEVEMENTS:

- We have developed our own SMSC platform for connecting and driving traffic through all mobile networks in Romania (GSM and CDMA).
- We have opened a new branch in Croatia.

REFERENCE PROJECTS:

Voxline has participated in the preparation process of proposal writing for EC funded projects, but not as a partner so far.

Selection of other projects

Televoting application for Eurovision, using SMS and IVR. Technologies used are the following programming languages – C/C++ and Perl. Both applications enable to receive over 500 votes/sec and verify the validity of the vote in a centralised database.

Multimedia applications developed for Romanian National Television. These applications display real time results in live shows using a real time video editing broadcast device. The hardware was supplied by Matrox. Those applications run in both analogue and digital environments.

Real time Alerts for bank customers. The application allows the user to interrogate his own account information using SMS, IVR or WEB support in a maximum security environment. The underlying database for this application is Oracle but it can be replaced by any other relational database (PostgreSQL, MySQL, Informix etc). Additional plug-ins can be developed for this application using Corba protocol.
